

Spider Grips Traction Gel™ is a specially formulated compound that sheds mud & water so it will stay tacky

Spider grips are the only grips on the market that are specifically engineered to reduce vibration and improve control.
Relax Your Grip

Remember, grip design isn't Rocket Science...

it's actually Applied Physics. http://www.spidergrips.com/media/imgs/prod_info_imgs/spider_info_imgs/viewer/ width=[100]}

Spider Offroad Grip Models

SPIDER M1 OFF ROAD GRIPS

The new Spider Dual Density M1 OffRoad grip has several key advancements. The outer surface of the dual layer grip is made from Spider's Traction Gel™. This material is naturally hydrophilic, so it sheds mud and water, yet maintains a tacky feel, even when wet. To maximize the features of Spider's Traction Gel™ Spider worked with competition tire designers to come up with a hydro-evacuation grip design. The combination of this design and the patented Traction Gel™, make the Spider grip the most comfortable grip while offering great performance in all conditions.

SPIDER SLX Slim Line OFF ROAD GRIPS

The Spider Dual Density SLX slim line OffRoad grip the latest in grip technology. The SLT

offers a smaller outer diameter for riders with smaller hands or for those who simply prefer a smaller diameter grip.

Using Spiders Traction Gel™ Spider's dual density grip is the only grip on the market that is specifically engineered to reduce vibration making it one of the best grips you will ever use.

Spider ATV Grip Models

SPIDER SLT Slim Line ATV GRIPS

The slim line SLT grips are specifically designed for ATV, Watercraft and Snowmobiles using thumb throttles. A 42mm flange eliminates any interference with thumb throttle. The SLT grip is a small flanged grip that features a slim diamond gel pattern that provides a comfortable feel. Using Spider's Traction Gel™ dual density compounds to soak up vibration.

SPIDER A3 ATV/Watercraft Grips

The Spider A3 ATV / Watercraft grip features the latest in grip technology. The A3 grip is a flangeless grip that is longer and larger in diameter than the SLT. Its profound diamond pattern and excellent water and mud shedding ability make the A3 very popular with recreational riders and watercraft pilots. Spider's A3 grips were originally designed for watercraft... but we find that

they are a perfect ATV grip that will outlast most others.

Spider Road Bike Grip

SPIDER SLR Slim Line Road Bike GRIPS

The Spider SLR Slim Line road bike grip features the latest in grip technology. The Spider dual density grip is specifically engineered to reduce vibration making it a great choice for road bikes. The SLR grip is a small flanged grip that features a slim diamond gel pattern that provides a comfortable feel, opened end design to accommodate bar ends. Spider's SLR grips will outlast and outperform most other grips on the market. Special Notes:

We recommend installing your grips with a quality grip glue to prevent the grips from coming loose. When using safety wire be sure to wrap the wire around the grip twice and don't over tighten the wire to prevent cutting into the grips.
